

QUALITY & SPEED: EMPLOYING DIGITAL TWINS TO ACCELERATE THE PRODUCT LIFECYCLE

Charlie Maher
Senior Director, Capital Projects
National Resilience, Inc.

Houston, we've had a problem...

Jim Lovell – Apollo 13 Mission Commander

NASA pioneered the use of digital twin technology during its space exploration missions of the 1960/70s, when each voyaging spacecraft was exactly replicated in an earthbound version that was used for study and simulation purposes by NASA personnel serving on flight crews.

Digital Twin

A digital twin is a virtual representation of an object or system that spans its lifecycle, is updated from real-time data, and uses simulation, machine learning and reasoning to generate insights and help decision-making

Digital Twin Applied to Pharmaceutical Product Lifecycle

Digital Twin Benefits

- Framework to organize and retain Product and Process Knowledge (PPK) throughout Product Lifecycle
- Automates generation of deliverables
- Enables employment of Analytics and Artificial Intelligence
- Increases value of the drug asset
- Accelerates and Improves Tech Transfer Process
